

B-ELASTIC™

Barrier Elastic For Light Cure Guides

Latex sheaths

Description:

latex sheath is ideal to protect the surfaces of the tools used in daily clinical practice, as it reduces the bacterial load and the organic microfilms that make sterilization predictability difficult. Elastic and resistant, they are easy to apply to objects of different shapes. hama code 1111-028

Sheaths for light-curing lamps

Description:

The transparent Light Barrier sheath is indicated to protect the optical fibre tip of light-curing lamps from any possible adhesion of the composite filling material, thus preventing cross-contamination of your patients. As the lamp tip cannot be sterilized, Light Barrier provides an ideal answer to your hygiene and safety requirements.
